Product development

Spotify is an Agile shop

Started agile, keeps being agile (or at least trying to be)

But Agile manifesto > Scrum or Kanban or Mob programming

Main guiding principles:

- Autonomous cross-functional teams (squads)
- Always evaluate and improve how we work – don't be afraid to change how we work – try and evaluate!
- Value teams over individuals, but give individuals a lot of freedom and a lot of support
- Celebrate failure! But don't do the same mistake twice, and fail fast!
- Diversity!

**So far, we could be a
ten people startup ...**

**What happens when
there are ca 150 squads?**

Organization

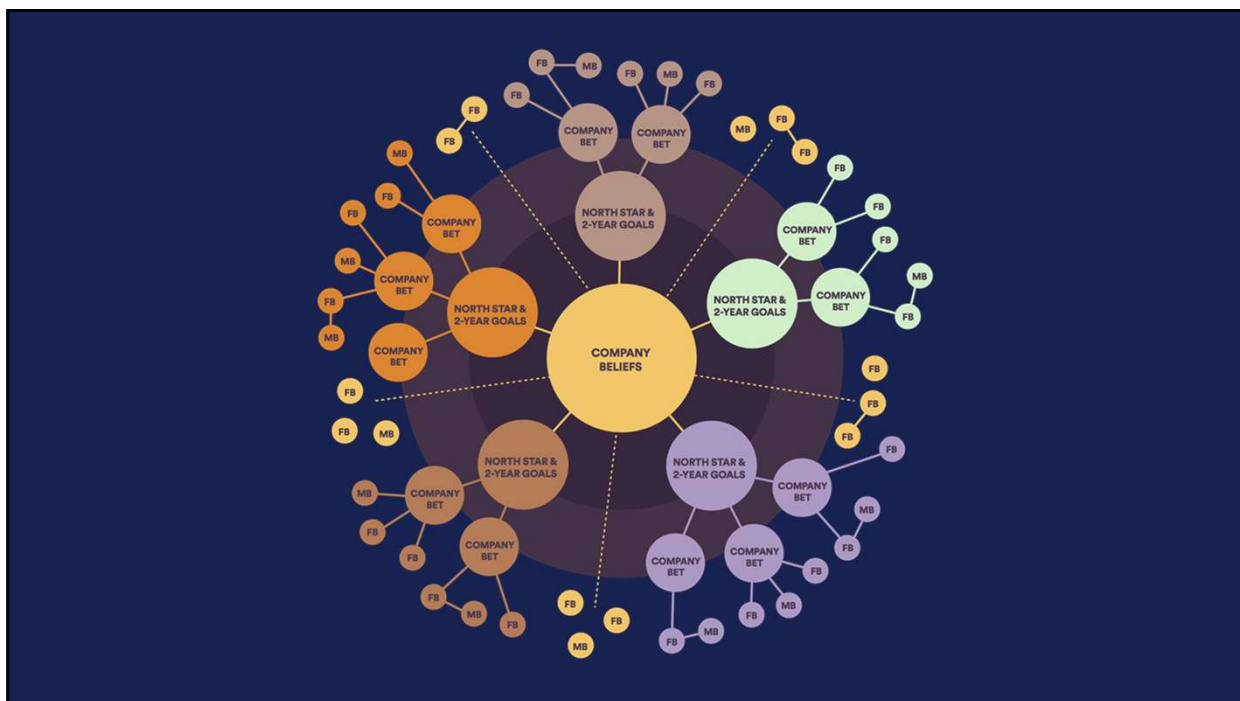

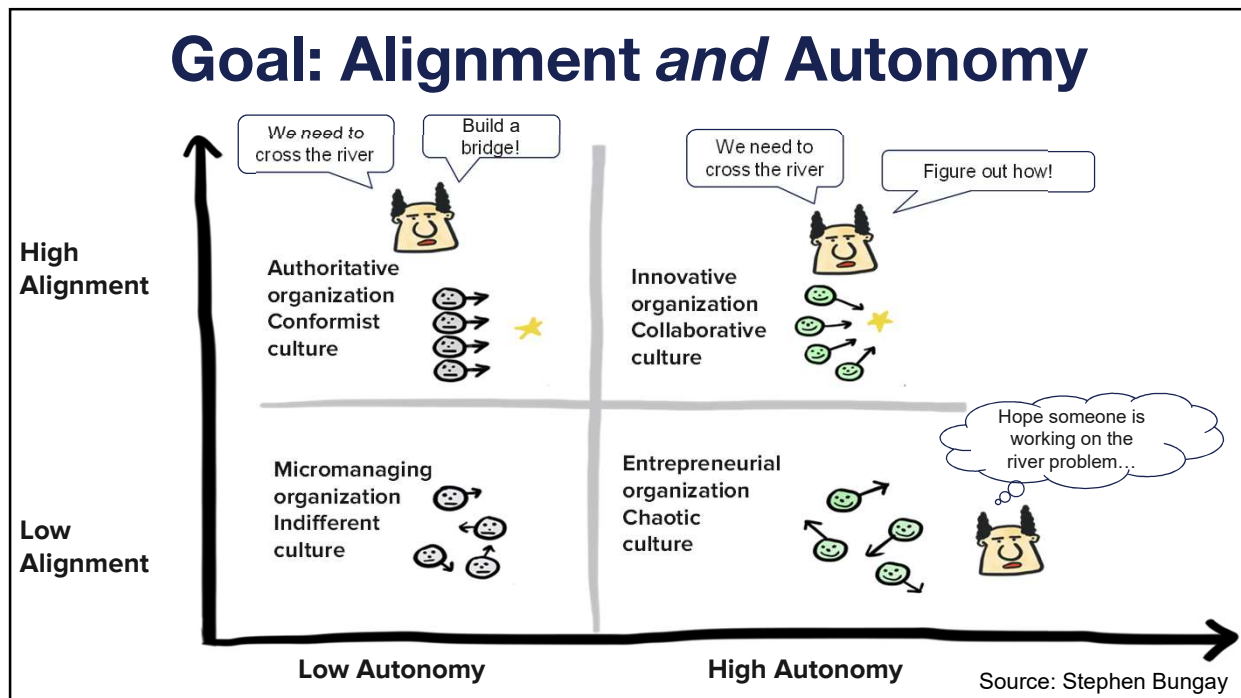

Mission and/or Alliance

Principles and challenges

Alignment

Current alignment strategy

- 10 Company bets ongoing at the same time
- Quarterly OKRs (on Tribe level)
(Objectives and Key Results. But basically: this is what we'll do this quarter)
- Quarterly planning (on Squad level)
(Remember: planning, and *estimation*, is HARD)
- Not super agile, but works better than before
(We've done it one quarter ...)
- Also important: Central UI/UX teams

The journey of a feature

Avoid this
